FULL THUMBWHEEL OPERATOR

IMPORTANT NOTE:

This operation must be performed before installing the glass units in their respective openings.

Test the functionality of the units by turning the thumbwheel in one direction (e.g., clockwise). When the louvers reach the closed position, continue turning in the same direction (e.g. clockwise) without fear of breaking the mechanism until the louvers eventually re-open. Complete two full louver cycles by turning the operator, always in the same direction (e.g. clockwise). Repeat these steps in the opposite direction (e.g. counter-clockwise) for two more full louver cycles.

ADDITIONAL INSTRUCTIONS

Install setting blocks under the metal plates glued to each unit. Make sure they are sufficiently rigid to secure the glass panels into their permanent position. The units must be level, plumb, square and in plane. Install the glass stops, which should have been notched at predetermined locations according to approved shop drawings, to accommodate thumbwheel operator.
