ZINC CRANK HANDLE OPERABLE ON ONE SIDE

Test the functionality of the units by temporarily installing the operator and tightening the set screw. The mechanism is self-reversing and should be tested as follows: Turn the operator in one direction (e.g. clockwise). When the louvers reach the closed position, continue turning 4-8 times in the same direction (e.g. clockwise) without fear of breaking the mechanism until the louvers eventually re-open. Complete two full louver cycles by turning the operator in the same direction (e.g. clockwise). Repeat these steps in the opposite direction (e.g. counter-clockwise) for two more full louver cycles.
